

From New Graduate to Analyst: Making the Transition

What skills from graduate school are most important to a new junior researcher or data professional? What do new graduates wish they had learned before starting as a professional in research and data? Join us to consider these questions and more, in a two-part panel discussion this fall. In part one, three recent Harris graduates discuss their positions in quantitative roles in the field; in part two, three professionals with direct experience in hiring at major data and research institutions will approach the same topics from their perspective.

This hybrid panel will be moderated by professor Jeff Levy.
